Is geduldig en een

Problem Statement

- How do we create a serious game in which people are safe to explore and recognize their own **implicit biases**?
 - a. How do we know what a biased response is?
 - b. How do we elicit biased responses?
 - c. How do we give a moment to reflect on biased responses?

Critical Mass

Develops experiences to make people reflect on their own perspectives in different social dilemmas

CRITICAL
MASS

Research

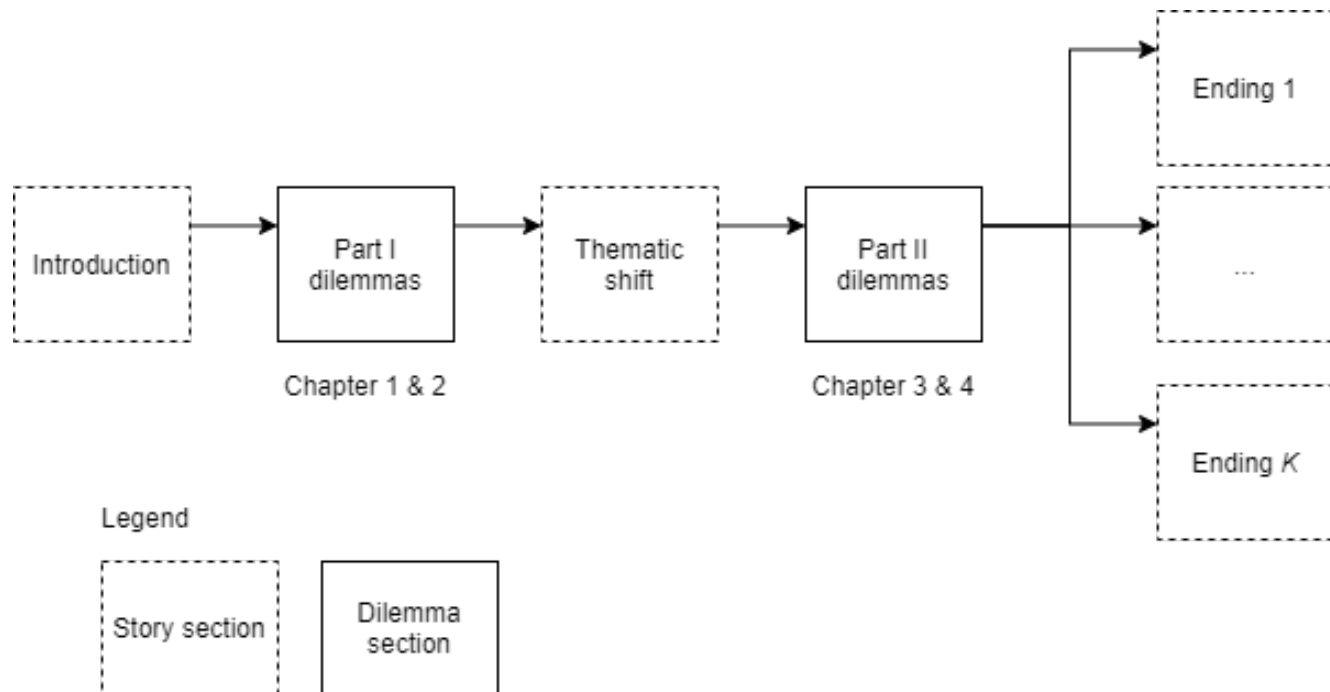

- Challenges
 - Player relatability to a virtual world
 - Fairly representing bias
 - Match with target audience (MBO students)

Game Premise

- Game Setting: Six characters are stuck on a deserted island and need to escape

Players' Goal	Our Goal
Make the characters escape the island.	Show implicit social bias of the player.

Game Design

Game Design (1/4)

- Quick decision making based on limited information
 - Time constraint
- Mainly on appearance biases: racial, gender, etc.

Fruit verzamelen

Iemand moet fruit in het bos verzamelen.

Game Design (2/4): Stories

- Counter-stereotypical characters.
- Assign characters to tasks.
- Feedback is given through character dialogue.
- Different stories may reveal same implicit bias.

Game Design (3/4): Feedback

- For each job, and the overall success of the chapter.
- Hints on what the characters are good at in the first two chapters.
- Give players chances to think about their implicit biases

Game Design (4/4): Post-game discussion

- Picked characters are aggregated
- Goal: Indicate what the bias of a group might be
- To lead the discussion of why they were picked

Demo

De radio toren repareren

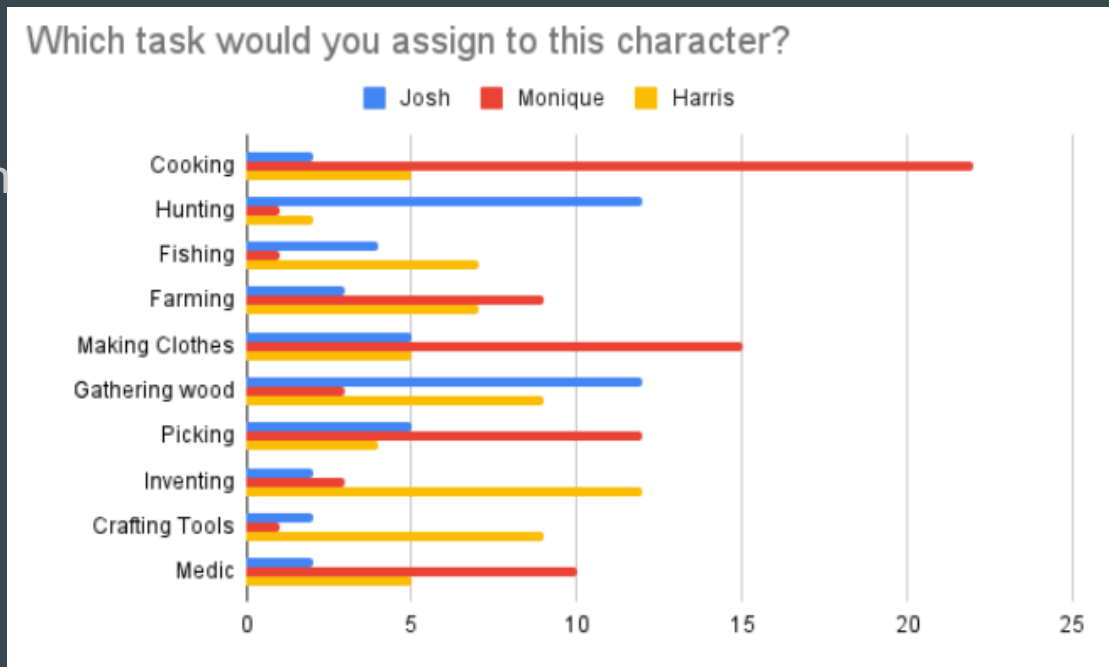

Tijdens de expeditie zag iemand van

Evaluation

- Phase 1 (Survey):
 - Characters description with portraits + select max. 3 jobs
- Phase 2 (Gameplay):
 - Characters description with portraits + 1 job matches with 1 character

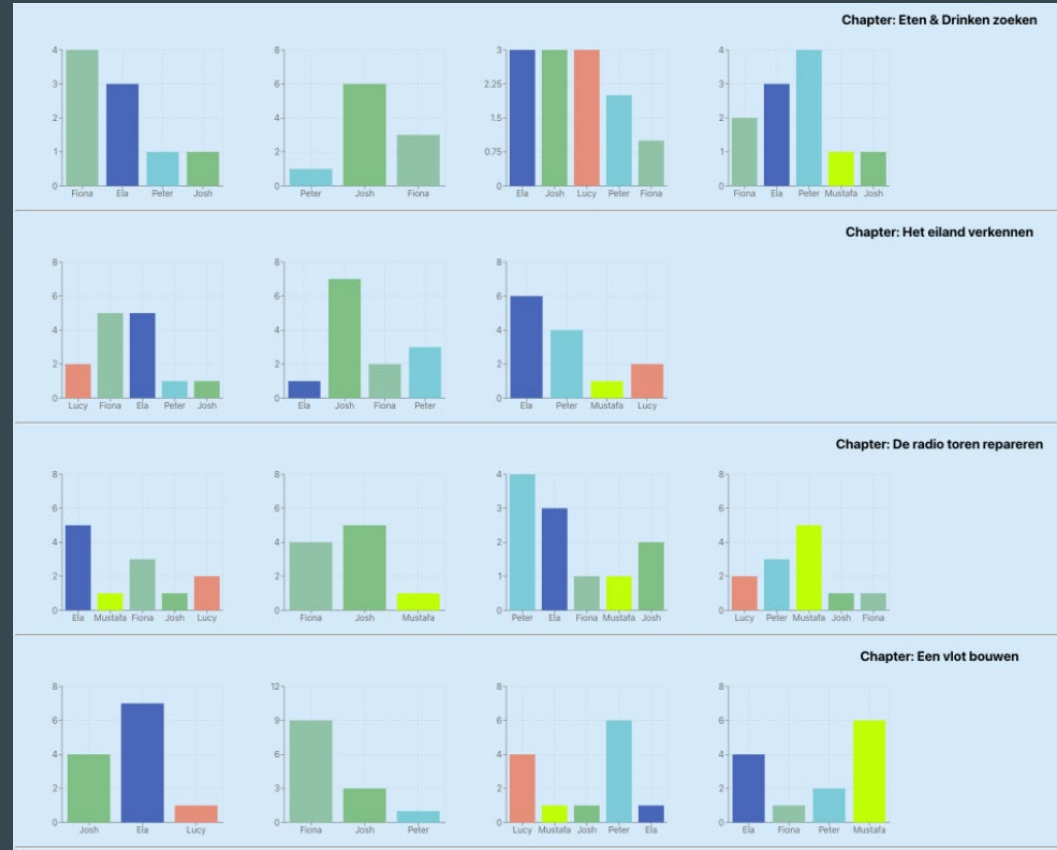

Phase 1: Survey Result (34 responses)

- Josh young black man
- Monique: elderly black woman
- Harris: elderly white man

Phase 2: Playtest

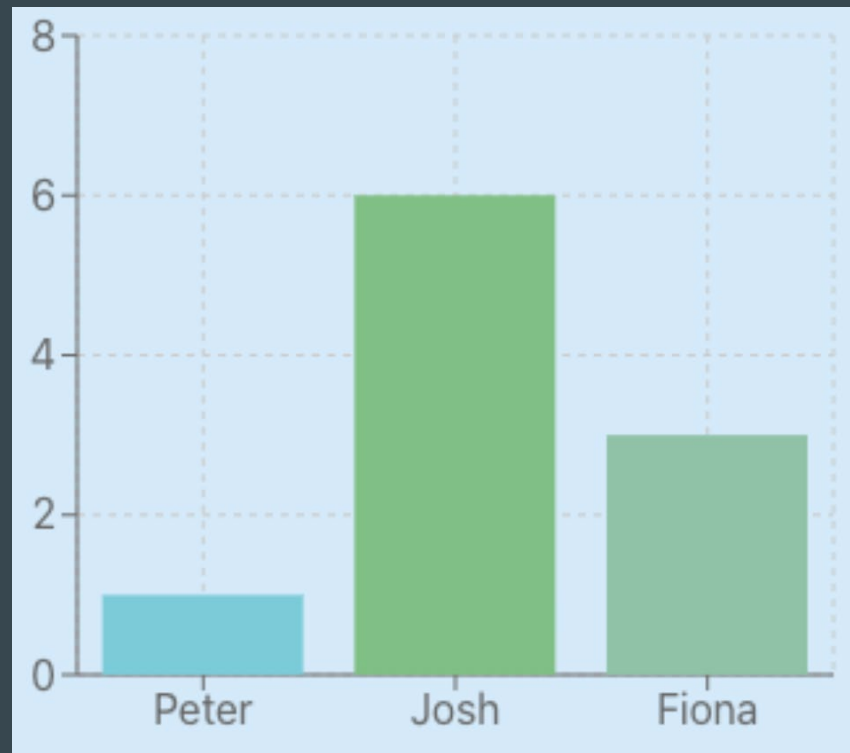

- Playtest at a MBO class of 15 students in Tilburg
- Playing data are collected on how students made choices
- Elicited probable implicit biases

Who should be hunting?

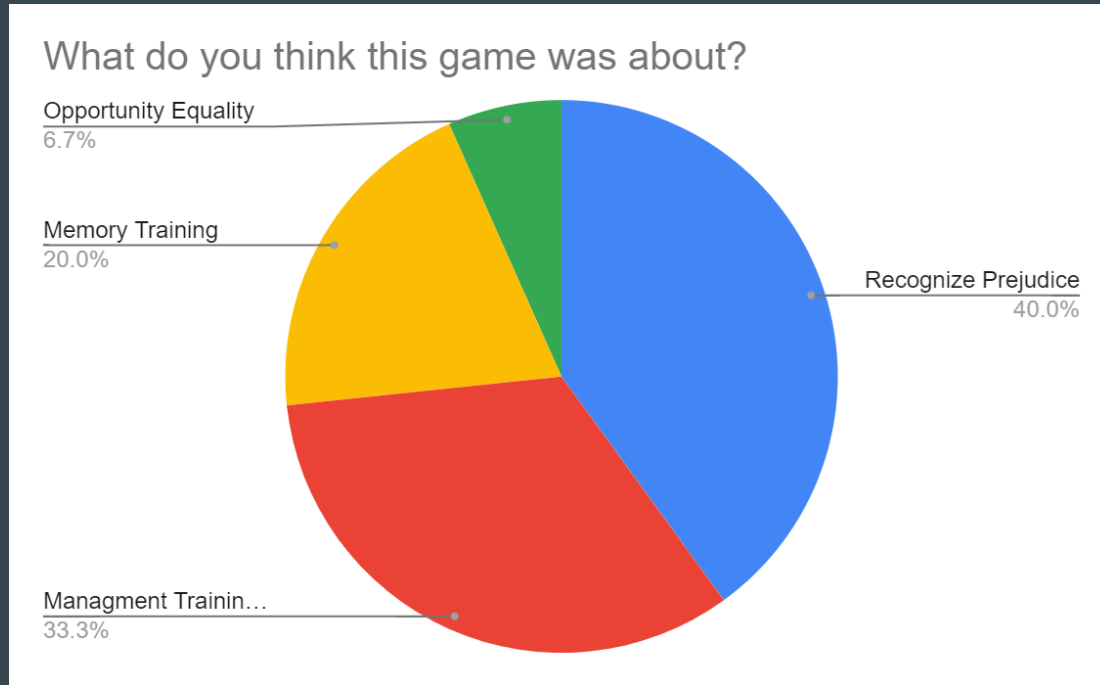

Phase 1

Phase 2

Phase 2: Survey Result (15 responses)

Phase 2: Survey Result (15 responses)

Did the game make you feel uncomfortable when you didn't come to the solution?

The game made me think about prejudices I didn't know I had.

Limitations

- Only one full-scale playtest
- Could not have a full post-game discussion about biases
- Could not perform a playtest on the intended platform

Future work

- More playtesting and evaluation
- Make the game look nicer and more engaging
 - More visual and audio content, less text
- More dilemmas, more endings
- Give a more in-depth interpretation to the data

Conclusion

- How do we create a serious game in which people are safe to explore and recognize their own **implicit biases**?
 - How do we know what a biased response is?
 - **Preliminary research + Survey 1 responses**
 - How do we elicit biased responses?
 - **Character assignment with limited information + time limit + player unaware**
 - How do we give a moment to reflect on biased responses?
 - **Character feedback phase + Post-game discussion***

Q & A
